Dear Hiring Manager,

I am excited to apply for the Application Developer Intern position at Walter P Moore. As a third-year Computer Science student at IIITDM Jabalpur, with a strong foundation in software development, I am eager to contribute my technical skills and problem-solving abilities to your team.

My experience includes developing full-stack applications using Python, React.js, Node.js, and Django. I have worked on projects such as a Hostel Management Module for the institute ERP portal, where I played a key role in designing and implementing an efficient system for managing student accommodations. Additionally, during my internship, I worked on a web application for real-time IPO and stock tracking, integrating pre-built APIs to fetch and display financial data seamlessly. These experiences have honed my ability to develop robust algorithms, integrate APIs for automation, and optimize workflows for enhanced user experiences.

In addition to my technical expertise, I have strong analytical and debugging skills, ensuring that applications are reliable and performant. My familiarity with front-end technologies like HTML, CSS, JavaScript, and frameworks such as React enables me to create intuitive and user-friendly interfaces. Furthermore, my ability to collaborate in team settings and participate in software design discussions allows me to contribute effectively to innovative projects.

I am particularly excited about the opportunity to work at the intersection of technology and structural engineering, where I can apply my software development knowledge to create impactful solutions. I look forward to the possibility of discussing how my skills align with your team's goals. Thank you for your time and consideration.

Sincerely,

Tushar Sharma
